DETAILED ACTION

Response to Amendment

The Amendment, filed on April 5, 2004, has been entered and acknowledged by the Examiner.

Cancellation of claims 1-3, 5-9, 12 and 13 has been entered.

Claims 4, 10, 11 and 14 are pending in the instant application.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Abstract, pursuant to MPEP 608.01(b), please replace the abstract in its entirety with the following paragraph,

--A high emission electron emitter includes an electron injection layer, an active layer of high porosity porous silicon material in contact with the electron injection layer, a contact layer of low porosity porous silicon material in contact with the active layer and including an interface surface with a heavily doped region, and an optional top electrode in contact with the contact layer. The contact layer reduces contact resistance between the active layer and the top electrode and the heavily doped region reduces resistivity of the contact layer thereby increasing electron emission efficiency and stable electron emission from the top electrode. The electron injection layer is made from an electrically conductive material such as n+ semiconductor, n+ single crystal silicon, a metal, a silicide, or a nitride. The active layer and the

Art Unit: 2879

contact layer are formed in a layer of silicon material that is deposited on the electron injection layer and then electrochemically anodized in a hydrofluoric acid solution. Prior to the anodization, the interface surface can be doped to form the heavily doped region. The layer of silicon material can be porous epitaxial silicon, porous polysilicon, porous amorphous silicon, and porous silicon carbide.--

In the claims,

This application is in condition for allowance except for the presence of claims 15-39 to an invention non-elected without traverse. Accordingly, claims 15-39 have been cancelled.

Allowable Subject Matter

Claims 4, 10, 11 and 14 are allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance:

Regarding claim 4, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 4, and specifically comprising the limitation of the electrically conductive silicide being selected from the group consisting of a titanium silicide and a platinum silicide, and the electrically conductive nitride comprising a titanium nitride.

Regarding claim 10, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 10, and specifically comprising the limitation of the porous epitaxial silicon being a material selected from the group consisting of n- porous epitaxial silicon, p- porous epitaxial silicon and intrinsic porous epitaxial silicon.

Regarding claim 11, claim 11 is allowable for the reasons given in claim 10 because of its dependency status from claim 10.

Art Unit: 2879

Regarding claim 14, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 14, and specifically comprising the limitation of for the porous silicon carbide, the n-type heavily doped region of the contact layer includes a dopant material selected from the group consisting of nitrogen, phosphorus and vanadium.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
